FSV-Elections

As every year, you are invited to elect the FSV, **FachSchaftsVertretung**, the legislative of the student council. The elections will take place from December 9th to 11th at different places, inform yourself!

What differs from the normal procedure: In addition to individuals, you can also vote for a list. You can inform yourself in the election newspaper, which will be available in the library as well as in each ballot box.

Freshmen Meeting

Topic: Studies start and tuitories

The student council cordially invites all freshmen* to come together to discuss together and in small groups about their experiences of the beginning of their maths studies. What is going well, what can be improved? Your Feedback will be exchanged with the professors. We are looking forward to see many of you on December 16th in the Lipschitzsaal, starting 18 c.t. Some snacks will be provided.*B.Sc. and aspiring teachers

Registration Xmas - Party

Due to safety regulations, only 199 people can attend the Christmas Party on December 19th. Who can come will be decided according to the principle first come - first serve. Starting December 7th, you can send a registration mail with your name to oeff@fsmath.uni-bonn.de. Registration fee, collected at the entrance, is 1€. You get

a warm meal, cookies, one-hour entertainment programme and mulled wine at cost price for that. Merry Christmas!

Had a good time?

Freshmen, we would like to hear your opinion! On www.fsmath.uni-bonn.de/something you will find a questionnaire, please attend, thanks!

The Twelve Days of Christmas

g_{12} = drummers drumming
 g_{11} = pipers piping
 g_{10} = lords a-leaping
 g_9 = ladies dancing
 g_8 = maids a-milking
 g_7 = swans a-swimming
 g_6 = geese a-laying
 g_5 = golden rings
 g_4 = calling birds
 g_3 = French hens
 g_2 = turtle doves
 g_1 = partridge € pear tree

for $d=1:12$

*On the d^{th} day of Christmas,
My true love sent to me...*

$$\sum_{i=1}^d (d-i+1) g_{(d-i+1)}$$

end

Riddle

The Student Council Mathematics bought mulled wine in a 120 litres barrel and want to distribute it equally among two points of sale. From the last WaCe, there are two empty barrels, one with a capacity of 80 litres (white wine) and ohne with 50 litres (red wine). How can they decant the wine in such a manner, that in the end the two bigger barrels contain 60 litres each?

The answer will be on the next loo paper.

Solution of last months riddle: 3
